DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 – 7, drawn to an apparatus and method for testing a sample of biologic fluid, classified in class 422, subclass 68.1.
- II. Claims 8 and 9, drawn to a method for testing a biologic fluid, classified in class 436, subclass 63.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility, such as for use in the analysis of samples requiring that the through-plane thickness or a volume of the sample field is determined. Invention II does not specifically recite a step for determining the through-plane thickness or a volume of the sample field during sample analysis. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

A telephone call was made to Richard D. Getz on 11/3/2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
